

Extend the Useful Life of Your Legacy Systems

Insulate your current applications from constantly changing external data requirements

Volante Technologies provides complete support for 70+ different financial standards and protocols. Communicate seamlessly with clients and other counterparties and Connect with third parties in as little as two weeks.

The financial data and message integration software for the global financial services industry

Target applications

- » MT-MX coexistence
- » Regulatory reporting
- » Customer on-boarding
- » SEPA
- » Payment hubs
- » Clearing & settlement
- » Corporate actions
- » Trade services
- » Treasury
- » Cash management
- » Reference data
- » Web forms
 - » Dashboard monitoring
 - » Message entry, view & repair
- » Big data
- » Risk
- » Trading

Business Benefits

- » High volume
- » Low latency
- » Proven technology in top-tier banks and securities market entities
- » Simple, business-based message design
- » Rapid delivery of solutions and functionality
- » Insulates business solutions from ever-changing data standards
- » Time to market advantage and improved ROI

For a demonstration of how Volante can accelerate your corporate action solutions, please contact us at info@volantetech.com or contact one of our regional offices below.

Simplifying the Complexity of Integration

Volante helps users avoid the need to understand the details of data integration. We provide a modelling environment fully embedded with knowledge of financial industry data:

- » From a familiar spreadsheet-style interface, users can define business messages and map them to applications and external entities.
- » The Volante model-driven approach eliminates the need for hand-coding. This can cut time and reduce costs by 50% or more in data integration projects.
- » Message creation and data management functions – such as validation, enrichment or persistence to databases – are automatically generated for any platform.
- » Volante also runs in any network or application environment, essentially integrating “anything to anything” in a financial enterprise.

Volante for Securities

Volante supports all formats and versions required for securities processing. All versions of SWIFT, FIX, FpML, XML, FIXML are supported, plus dedicated plug-ins for Omgeo, Bloomberg back office and Reuters market data. Investment banks and asset managers can streamline of their front, middle and back office STP operations by leveraging the interoperability of our messaging solution.

Volante MT-MX

To migrate from MT messages to the more specialized MX messages, or to address new initiatives like SEPA, SCORE, Funds, T2S, etc., Volante provides comprehensive coverage while hiding the complexity of the new standards to enable easy and rapid adoption.

DTCC Corporate Actions Messages

Volante provides out-of-the-box support for the new DTCC initiative to modernize Corporate Actions Processing Systems using the new ISO 20022 formats. Volante eases the migration of legacy systems by providing a complete framework that manages message definitions, mapping, enrichment, testing and implementation - without writing a single line of code.

Big Data integration

Volante’s plug-in for Hadoop provides support for Big Data Integration. The complexities of handling financial messages in Hadoop and the ability to simulate and test on a desk-top, simplifies and accelerates the Big Data solution development.
